

Water Engineering

Arthur Jones-Dove, PE, CCM, MBA, PMP, PgMP

Vice President, Mid-Atlantic Water Sector Leader

TYLin

ENGINEER SPOTLIGHT

Years in the Industry: 29 years, though my engineering journey really began at age 10, learning the profession firsthand from my dad, a Civil engineer with a focus in transportation. (yes...do the math)

What are you proud of as an Engineer?

"I am most proud of helping communities protect public health and the environment by leading large-scale water and wastewater infrastructure programs, from regulatory compliance and asset management to sustainable delivery that strengthen aging systems and ensure reliable service for generations to come. I am passionate about inspiring future generation of engineers by making engineering cool!"

Why does Water Engineering matter in our Metropolitan Washington region?

"Water is life. As our region faces climate change, aging infrastructure, stricter regulatory requirements, and a shrinking workforce, water engineering is critical to protecting public health, economic vitality, and long-term resilience by helping communities do more with less."
