Structural Engineering

Kirby Hartle, PE

Principal

Top Level Engineering, LLC

Years in the Industry: 30 years

What are you proud of as an Engineer?

"Providing elegant solutions to challenging problems. The goal is for safe and reliable structures that stand the test of time. If I design a striking feature or structure and people notice, that's great, but most of our designs go unnoticed and that is also by design."

Why does Structural Engineering matter in our Metropolitan Washington region?

"The role of the structural engineer is critical to the safety and well-being of society while improving the quality of life. Most of the public does not know what we do and do not realize that it is due to the hard work and dedication of generations of structural engineers that they feel safe entering a building, going up or down several floors, entering a large open space, or even walking around outside of them. We can thank structural engineers for making these things possible."
